PROFILE

Full-Stack & Cloud software engineer and JUNIA graduate. I design and structure digital solutions end to end, from analysing the need through to deployment, combining TypeScript, React, Python, Azure, Docker and Kubernetes across SaaS products, APIs, IoT systems and applications built on AI. Independent, rigorous and product-minded, I turn complex problems into solutions that are reliable, secure and genuinely usable.

SKILLS

Languages	Python · TypeScript · C/C++ · C# · Java · Kotlin · SQL · Bash
Cloud & infra	Azure (AKS, DevOps) · Terraform · Docker · Kubernetes · CI/CD (GitHub Actions, GitLab, Jenkins) · IaC · Monitoring
Web & data	React · Next.js · Vite · Node.js · Supabase · PostgreSQL · MongoDB · REST APIs · Stripe
AI & data science	LLMs (GPT, Claude, Gemini) · Fine-tuning · PyTorch · Hugging Face · OpenCV · NLP · PyMC
Embedded & IoT	ROS · Raspberry Pi · Arduino · MQTT · Real-time systems · Embedded Linux

EXPERIENCE

Computer Vision Developer

Aug 2026

Smart Waste Detector with YOLO · **PERSONAL PROJECT** · Remote

- Trained an Ultralytics YOLO model through transfer learning to detect six waste categories: biodegradable, cardboard, glass, metal, paper and plastic.
- Reached mAP50 0.496 and mAP50-95 0.344 after 30 epochs on validation, then analysed the misclassifications caused by domain shift, lighting and class imbalance.

Python · Ultralytics YOLO · PyTorch · Google Colab · Kaggle API

Founder & Full-Stack Engineer

May 2026 — Jul 2026

Influence Persona · **SOLO VENTURE** · Remote

- Designed a multimodal SaaS platform single-handedly, covering images, reusable avatars, scene merging, video, lipsync, media library and administration.
- Built a serverless architecture separating a Vite front end from Supabase authentication, PostgreSQL with row level security, storage and fifteen Deno Edge Functions.
- Orchestrated AI workloads across fal.ai, Alexya and EvoLink, with asynchronous video generation tracking, result persistence and credit accounting.
- Implemented credit-pack monetisation through Stripe Checkout, customer portal and webhooks, backed by thirty-three versioned SQL migrations.

Vite · TypeScript · Supabase · Deno Edge Functions · PostgreSQL/RLS · Stripe · fal.ai · Cloudflare Pages

Author of the scientific prototype

Apr 2026

Bayesian state-of-health estimation for Li-ion batteries · **RESEARCH PROJECT** · Remote

- Compared two Bayesian approaches to state-of-health estimation: a per-battery model and a hierarchical model pooling information across a simulated fleet.
- Ran NUTS inference with PyMC and NumPyro, posterior predictive checks, and remaining useful life estimation with 90% credible intervals.

Python · PyMC · NumPyro/JAX · ArviZ · NumPy · SciPy

Simulated dataset inspired by NASA PCoE; not validated on real cells.

Designer & Full-Stack Developer

Nov 2025 — Apr 2026

CheckAI · **PERSONAL PROJECT** · Remote

- Built a serverless SaaS on React/Vite and Netlify Functions, separating the detection, billing, session management and account deletion responsibilities.
- Integrated a RoBERTa inference pipeline through Hugging Face, normalising the score into a usable probability and handling model downtime.
- Gated every analysis on Supabase profiles, credits and quotas, and implemented the Stripe subscription, customer portal and webhook synchronisation.

React · Vite · Netlify Functions · Supabase · PostgreSQL · Stripe · Hugging Face

Designer & Front-End Developer

Dec 2025 — Feb 2026

GoEditPDF · **PERSONAL PROJECT** · Remote

- Designed a privacy-by-design architecture running all PDF processing in the browser, with no document transfer to an application server.
- Built a complete manipulation chain — merge, reorder, rotate, extract, annotate, sign, watermark, redact — assembling PDF.js, PDF-Lib, Fabric.js and Tesseract.js for local OCR.
- Shipped in French, English and Spanish with responsive layouts, help flows and tutorials.

JavaScript · PDF.js · PDF-Lib · Fabric.js · Tesseract.js

Sales assistant

Aug 2025 — Sep 2025

Inditex (Zara) · **EMPLOYMENT** · Le Chesnay-Rocquencourt (78), France

- Customer service under sustained footfall, working to Inditex brand standards and handling returns and complaints.

Transitional employment after graduating, alongside the development of personal technical projects.

General assistant

Jul 2025 — Aug 2025

Auchan Retail · **EMPLOYMENT** · France

- Aisle, checkout and restocking duties in a high-traffic hypermarket, under strict traceability, hygiene and stock rotation processes.

Final-year intern — Cloud & IoT architecture (AKS proof of concept)

Apr 2024 — Oct 2024

Hager Group · **INTERNSHIP** · Obernai (67), France

- Owned end to end an Azure proof of concept assessing the secure deployment of IoT services on Azure Kubernetes Service over a private network.
- Designed a private Azure architecture split across three virtual networks, using VNet Peering and Private Endpoints to secure traffic between AKS, virtual machines and Azure SQL.
- Containerised and orchestrated .NET IoT APIs with Docker, Docker Compose and Kubernetes; added health checks and resolved Azure SQL connectivity issues.
- Worked around an ARM64 incompatibility in the Docker images with a compatible builder, an AMD64 node suited to the workloads and cluster autoscaling.
- Produced a monthly cost estimate for the target architecture, stating the assumptions, limits and items still to refine.

Azure · AKS · Kubernetes · Docker · Azure SQL · VNet Peering · Private Endpoints · Azure DevOps · .NET Core · Databricks · Azure OpenAI

Academic support tutor

Oct 2023 — Jun 2024

JUNIA · **EMPLOYMENT** · Lille, France

- Tutored secondary and high school students under a regional academic-success and widening-access scheme backed by the Hauts-de-France Regional Council; part-time contract capped at 160 hours.

R&D intern — Embedded systems, SLAM & operator HMI

Jun 2023 — Aug 2023

Mirion Technologies · **INTERNSHIP** · France

- Designed and validated an embedded real-time 2D mapping prototype end to end, from requirements analysis through SLAM solution selection to functional testing.
- Built the ROS Noetic / Python architecture around an RPLIDAR A1M8, an HWT905 orientation sensor and Hector SLAM, with real-time data flow over ROS topics and RViz visualisation.
- Wrote a Python/Tkinter HMI automating LiDAR and SLAM startup, live map display and map saving, reducing the room for operator error.
- Called the migration from a Raspberry Pi 4 to an Intel N100 mini-PC after identifying an incompatibility with the required ROS version.

ROS Noetic · Python · Hector SLAM · LiDAR RPLIDAR A1M8 · RViz · Raspberry Pi · Embedded Linux

Other projects LexiNegotiate — Gemini hackathon prototype for contract analysis · HuntFlow — ATS/CRM, in progress · EyeGuard — connected-door prototype, embedded OpenCV + Android + MQTT · Devis BTP — AI-assisted construction quoting · EmailTrack — email open tracking (API, dashboard, Chrome extension)

EDUCATION

Diplôme d'ingénieur — French engineering degree, master's grade

2019 — 2024

JUNIA — École des Hautes Études d'Ingénieur (HEI) · Lille, France

Awarded for the 2023/2024 academic year on 21 November 2024. Declared track: Computer Science and Information Technology.

LANGUAGES

French — native · English — professional

Every entry above is backed by a primary source: a code repository, an internship report, a contract or a diploma.
